

When you take quizzes in Vista Virtual School's Learning Management System ([Moodle](#)), you may encounter different types of questions.

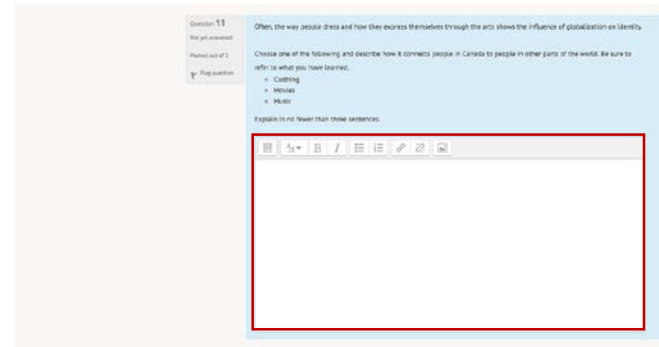

Most commonly, you'll see multiple choice questions. To answer these, simply click the circle next to the best response.

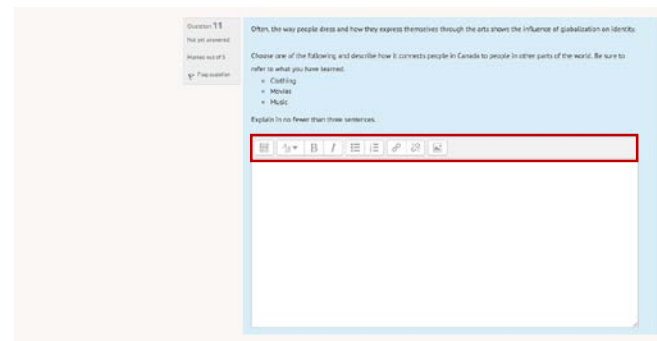

There are many other different question types as well. You may see drag and drop questions, best choice questions, matching questions, fill in the blank, and others—in any case, it's very important to read the instructions that come with the question.

You may also be provided with written-response questions, where you can enter your responses into the textbox.

Feel free to use the basic formatting tools as well.

Keep in mind that, when written questions are involved, there may be a delay before you get your feedback because your responses will be graded manually by your teacher rather than automatically by the system.
